The tough emergency backpack HELBIG® Profi XL measures 55 x 50 x 30 cm and is designed to keep all equipment for ACLS. Complan material is resistant to dirt and is durable. Zippers come from YKK (highest reputation), the two-way-principle ensures easy access. Easy carrying possible through anatomical formed back, upholstered shoulder- and pelvic straps and only six kg weight empty. The high-efficient system helps you keep contents secure and compact: 5 exterior compartments (3 of them removable), 13 modular colour-coded compartments in different sizes (all with transparent plain, 2-way-zippers and Velcro on the back), one removable holder for oxygen-cylinder (up to 2 ltrs volume) keeps it in place and shelters the regulator, many elastic loops in different sizes in the inner part and airway compartment, and a medical drug compartment (size M) for approximately 35 ampoules. Everything in place and highest overview – let's go to work...

Front: **Lower fixed compartment** (26 x 33 x 11 cm) for infusion fluids (3x 500 ml and 1x 250 ml) and i.v.-access accessories.

Upper fixed compartment (26 x 33 x 11 cm) contains 4 modular compartments (e.g.: 2x Size S and 2x Size M) or the optional HELBIG® ampoule shelter L (up to 70 ampoules, many cannulas and syringes).

Sides: **Removable compartments** (2 small 16 x 12 x 5 cm; 1 large 42 x 12 x 5 cm) easy-to-fix by Buddy-Lok-System for equipment you need quickly.

Inner divider with elastic loops on both sides separates the main shelf (containing 7 modular compartments, oxygen-cylinder-holder and size M ampoule shelter) from the airway compartment with transparent pocket for e.t.-tubes and 2 modular compartments (Size M and XS).
